(how to compile and run your code)
ruby rtn.rb dict_file rtnspec_file test_file

(which CADE machine you tested your program on)
CADE lab1-2

(any known bugs, problems, or limitations of your program)
this algorithm was developed with a breadth first search instead of depth first, so the ordering of the successful parses are different than the sample trace.

you can also manually test the program here: **http://mikeapps.org**

this program was written in ruby (1.8.7 and 1.9.3)
